

LaTeX style file for ESANN manuscripts

First author¹ and Second author² *

1- School of First Author - Dept of First Author
Address of First Author's school - Country of First Author's school

2- School of Second Author - Dept of Second Author
Address of Second Author's school - Country of Second Author's school

Abstract. Type your 100 words abstract here. Please do not modify the style of the paper. In particular, keep the text offsets to zero when possible (see above in this 'ESANNV2.tex' sample file). You may *slightly* modify it when necessary, but strictly respecting the margin requirements is mandatory (see the instructions to authors for more details).

1 Typesetting an ESANN document using L^AT_EX

This is a sample file. Please use this file to correctly typeset a submission to the ESANN conference. The associated pdf file will help you to have an idea of what your paper should look like.

1.1 Page format and margins

Please avoid using DVI2PDF or PS2PDF converters: some undesired shifting/scaling may occur when using these programs. It is strongly recommended to use the DVIPS converters, and to submit PS file. You may submit a PDF file if and only if you use ADOBE ACROBAT to convert your PS file to PDF. Check that you have set the paper size to A4 (and NOT to letter) in your dvi2ps converter, in Adobe Acrobat if you use it, and in any printer driver that you could use. You also have to disable the 'scale to fit paper' option of your printer driver. In any case, please check carefully that the final size of the top and bottom margins is 5.2 cm and of the left and right margins is 4.4 cm.

1.2 Additional packages and functions

Update the sample file according to your text. You can add packages or declare new L^AT_EX functions if and only if there is no conflict between your packages and the esannV2.cls style file.

1.3 Style information

1.3.1 Page numbers

Please do not add page numbers to this style; page numbers will be added by the publisher.

*This is an optional funding source acknowledgement.

1.3.2 Page headings

Do not add headings to your document.

1.4 Mathematics

You may include additional packages for typesetting algorithms, mathematical formula or to define new operators and environments if and only if there is no conflict with the `esannV2.cls` file.

It is recommended to avoid the numbering of equations when not necessary. When dealing with equation arrays, it could be necessary to label several (in)equalities. You can do it using the `\stackrel{a}{=}` operator (see the `ESANNV2.tex` source file); example:

$$\begin{aligned} c &= |d| + |e| \\ &\stackrel{(a)}{=} d + e \\ &\stackrel{(b)}{\geq} \sqrt{f} \end{aligned} \tag{1}$$

where the equality (a) results from the fact that both d and e are positive while (b) comes from the definition of f .

1.5 Tables and figures

Figure 1 shows an example of figure and related caption. Do not use too small symbols and lettering in your figures. Warning: your paper will be printed in black and white in the proceedings. You may insert color figures, but it is your responsibility to check that they print correctly in black and white. The color version will be kept in the ESANN electronic proceedings available on the web.

Table 1 shows an example of table.

ID	age	weight
1	15	65
2	24	74
3	18	69
4	32	78

Table 1: Age and weight of people.

2 Citation

This `ESANNV2.tex` file defines how to insert references, both for BiBTeX and non-BiBTeX users. Please read the instructions in this file.
